	<p><u>VIRASAT – The Heritage' Vocal for Local: Go Global'</u></p> <p>India is home to 3,000 craft forms with artisans spread across the country. The handloom and handicraft industry has been the backbone of India's rural economy for decades. It is one of the largest employment generators after agriculture, providing a key means of livelihood to the country's rural and urban population. According to official estimates, India is home to 7 million artisans. However, data from unofficial sources indicates that the artisan strength is as high as 200 million. The wide nature of this range and disparity in the number is due to the informal and unorganised character of this sector.</p> <p>The tangible and intangible nature of India's craft heritage, coupled with its regional uniqueness, presents the country with a competitive global advantage. The Indian craft sector has the scope to become a billion-dollar marketplace with the right support and business environment. Developing a systematic approach, which nurtures the intrinsic value of craft skills and opens avenues for product design and manufacturing, will increase access to new markets. Alongside this, capitalising on e-commerce for online visibility and operational efficiencies will prove to be a critical success factor as the sector evolves and gains further traction.</p>
